## COMPLIANCE ADVISORY

### Notice of Adoption of Rule 67.22 Expandable Polystyrene Foam Product Manufacturing Operations

On June 7, 1994, the San Diego County Air Pollution Control Board adopted Rule 67.22. Rule 67.22 is a new rule that regulates volatile organic compound (VOC) emissions from expandable polystyrene (EPS) foam product manufacturing facilities which emit 25 or more tons of VOCs per year.

The new rule will require the following:

**New VOC emissions standard**

Require facilities to meet a production-based emissions standard of 3.0 pounds of VOC emissions per 100 pounds of EPS foam product.

Compliance options include process modifications, such as switching to low-pentane-content raw materials, or adding air pollution control equipment to all or part of the operation.

**Compliance schedule defined**

Specify a compliance schedule with a final compliance date of June 7, 1995, for facilities which install air pollution control equipment or modify their production processes to comply with the rule.

**Recordkeeping requirements**

Require recordkeeping to determine annual emission rates and demonstrate daily compliance if air pollution control equipment is required.

**Test methods defined**

Specify test methods for determining compliance.

A copy of Rule 67.22 is enclosed. For more information, please call the District's Compliance Division at (619) 694-3340.
